REFRACTIONS

A refraction is a diagnostic test, used for the purpose of a new eyeglass prescription or as a diagnostic service to determine the presence or severity of a medical condition.

This test is **NOT** included in the eye exam and is billed separately. This test is **NOT COVERED** by Medicare and most insurance plans and is **billable to the patient**.

Traditionally, medical insurance does not cover eyeglasses, dentures, canes, etc. as the need for these items is considered a normal part of aging.

The refraction part of the eye exam is not typically covered. However, sometimes, we need to determine your best corrected vision to determine how healthy your eyes are.

Payment is expected at the time of service. Please pay at the checkout window.

I, _____, understand that Medicare and/or my insurance plan will not cover this test and **I agree to pay** for the refraction charge of **\$45.00**.
